WORKSHOPS

Current Suggestions

1 Airway – Newer Aids to Intubation/ Other airway devices

?Ask Tom Englehardt and Rob Walker to lead?

2 Ultrasound for Difficult venous access (not just CVL)

?James Bennett et al

3 TIVA – Recent advances

?Oliver Bagshaw/Tony Absolom

4 ?? Orpheus CVS simulator

AW and Bristol Team

1,2 and 3 are fine. Orpheus needs exploration as to its financial and technical feasibility (AW and AC)

An alternative may be "The consultant interview"

OTHER POINTS

The venue can accommodate a third session and we had ideas that this may be good for industry sponsored things (the money would be useful!) and a "Pediatric Anesthesia" Session etc as in Torquay, on Day 1. Could also accommodate small panel discussions if this was wanted on Day 2. My question here is do we want to have three separate things going on at the same time? Would like to see figures for attendance at Torquay for the parallel sessions on cuffed tubes and the Pediatric Anesthesia session before deciding. These could be decided upon later but need to make a decision as to how to use the venue best.

Day 1

Hall 11a (need to pay for AV)

Pediatric anaesthesia sponsored session

Industry sponsored sessions x1 or 2

Day 2

Third (small) breakout room.

Round Table discussions

Tanner

Revalidation

Trainee issues (Ask the expert, vignettes)

Sub specialist groups (Cardiac/neuro/pain etc).

TIMINGS

See separate Timetable to accompany programme

Because of having parallel streams we need to think about how to start the meeting in particular. Would be best to have a single opening session in main hall for all attendees. Will then need to allow a few minutes for people to disperse to the second hall.

Is there a better way to close the meeting rather than having everyone running off at or just before the end?
