

Summary Of Dataset

Name of Centre

.....

Centre type (Please circle)

Tertiary Centre	OR	DGH
Children’s only Hospital	OR	Mixed Adult and Children’s Hospital

Total number of planned day case procedures in the 6 week time period
(Please include all general anaesthetics for patients 0-16 years, including radiology and endoscopies, and urgent/emergency/non elective cases where they are brought in on the day and planned to go home the same day. Oral sedation cases are excluded.)

Total number of unplanned admissions

Do you have a paediatric pre-assessment clinic? Yes / No

If no, do you have any pre-assessment service, perhaps over the phone? Please specify

.....

In this 6-week time period how many pre-assessment sessions have run?
(a full day would be 2 sessions)

Do you have HDU facilities? Yes / No

Do you have ICU (PICU) facilities? Yes / No

For all patients who undergo day case surgery in the 6-week study period we need to collect similar data to the unplanned admissions. It will not be realistic to capture this day by day. It will take careful planning to work out the logistics of how you will get this data. Please see our guide for suggestions.

Please populate the attached spreadsheet with details of ALL your planned day cases remembering to:

- Make sure you submit age (years) or if <1 year (months) rather than date of birth. Please convert it. We do not have approval to collect DOB in the Safe Haven.
- Remove the column containing hospital numbers from your spreadsheet before submitting.
- Make sure you have highlighted all the unplanned admissions in the Y/N column.
- Remove the columns referring to date:
 - DOB (if you have used it to identify patients)
 - Date of admission
 - Date of procedure
 - Date of discharge
